

BENEFITS:

AEROBIC SOIL ACTIVITY

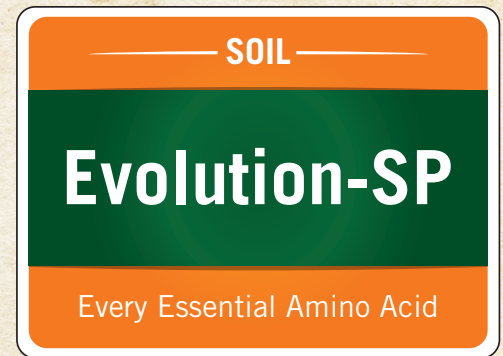

ENHANCES MICROBIAL FUNCTION

NATURAL ENZYMES

PLANT ENERGY

IMPROVES PLANT STRENGTH

Evolution-SP is a new and improved proprietary formulation of concentrated amino acid, simple proteins and carbohydrates fortified with plant enzymes, vitamins, and plant sugars to improve soil function and microbial proliferation, creating an environment for ongoing improved plant health.

PROFESSIONAL USE GUIDELINES ⑤

APPLICATION:

Evolution-SP should be thoroughly dissolved and dispersed in the spray tank prior to the addition of other spray components. In some instances, it may be desirable to pre-mix (slurry) in a separate vessel prior to adding to the spray tank. Lightly water in. When thatch accumulation is a consideration, material must be watered enough to pass through thatch to the soil. A pre-application light spiking of the thatch layer is recommended.

RATE OF APPLICATION:

Apply 6 lb (4 containers) / acre (5.6kg [8 containers] / ha) every two to three weeks during the active growing season. Recommended during stress periods, grow-in, overseeding, and immediately after aerification or spiking.

4 x 1.5 lb (0.68 kg) jugs
