

MINING

UNLOCK THE SOIL

Almost all nutrients have an affinity for each other. Phosphorous is especially efficient in binding with calcium and micronutrients. Enhance the availability of nutrients by breaking the “tie that binds.”

■ UNLOCK

Calphlex provides layers of multi-cyclic chelates for mobilizing calcium, iron, magnesium, manganese, and zinc.

■ RELEASE

Maxiplex's humic acid molecules migrate between soil colloids where they release potassium, phosphorous, and iron.

■ OPEN

Pervade is a specially designed product for penetrating the soil profile and opening “pipelines” for water flow.
